FitHub CRM

Fitness Center Management System

PHASE 1 — REQUIREMENT ANALYSIS & PLANNING

Phase	Platform	Method	Status
Requirements	Salesforce	Agile/SDLC	In Progress

01 Introduction

The Requirement Analysis and Planning phase focuses on understanding business needs, identifying system requirements, and defining the overall project scope. This phase ensures that the developed CRM system aligns with the real-world operations of a fitness center and delivers maximum value to all users.

> **Purpose:** This phase acts as the blueprint for the entire FitHub CRM development — aligning technology with real business needs.

02 Understanding Business Requirements

The primary goal of FitHub CRM is to simplify and automate the daily operations of a fitness center.

Key Business Needs

Efficient management of member data	Easy class scheduling and booking system	Automated notifications and reminders	Tracking payments and memberships	Generating reports for decision-making

Problems to Solve

Manual errors in data handling	Difficulty in managing bookings	Lack of communication with members	No centralized system exists

03 Functional Requirements

These define what the system must do — the core capabilities delivered to every user.

F1	Create, update, and manage member records
F2	Manage trainers and assign them to classes
F3	Create and manage fitness class schedules
F4	Allow members to book and cancel classes
F5	Automate email notifications for bookings
F6	Generate reports and live dashboards

04 Non-Functional Requirements

These define the quality, performance, and operational standards the system must meet.

Performance	Handles multiple concurrent users efficiently without degradation
Security	Data protected with role-based access and field-level security
Scalability	Architecture supports growth in members, classes, and locations
Usability	Clean, intuitive Lightning interface requiring minimal training
Reliability	99.9% uptime with Salesforce cloud infrastructure guarantees

05 Project Scope & Objectives

In Scope

- Member management
- Class and trainer management
- Booking system
- Automation and reporting

Out of Scope

- Payment gateway integration (future enhancement)
- Mobile application development

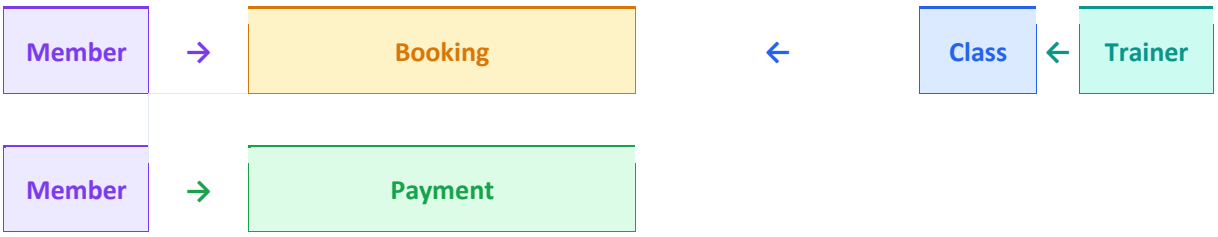
Objectives

01	Automate fitness center operations end-to-end
02	Reduce manual workload and eliminate data errors
03	Improve efficiency and operational accuracy
04	Provide real-time insights and dashboards

06 Data Model Design

The high-level data model defines the core objects and their relationships in Salesforce.

Object Relationship Diagram



Relationships

One Member → Many Bookings	One Trainer → Many Classes	One Class → Many Bookings	One Member → Many Payments

07 Security Model Design

Goal: Ensure every user can access only the data relevant to their role — nothing more, nothing less.

Profiles	Admin, Trainer, Staff — control object & field access
Role Hierarchy	Ensures managers see subordinates' records
Field-Level Security	Sensitive fields hidden from unauthorised users

Record-Level Access	Sharing rules limit which records each user sees

08 Stakeholder Mapping

Gym Owner	Trainers	Members	Admin Staff
System Admin & Decision Maker	Manage classes and member sessions	Book classes and track membership	Manage data and daily operations

09 Execution Roadmap

A structured six-step plan guiding the FitHub CRM from concept to delivery:

01 Requirement Analysis
Gather and document all business and system needs

→

02 System Design
Design data model, security, and architecture

→

03 Salesforce Configuration
Setup objects, fields, relationships, and profiles

04 UI Development
Build Lightning Web Components and page layouts

→

05 Testing
Unit testing, UAT, and end-to-end validation

→

06 Documentation
Final reports, user guides, and handover package

10 Conclusion

The Requirement Analysis and Planning phase provides a clear understanding of the business needs and system expectations. It acts as a blueprint for the development of FitHub CRM, ensuring that all functionalities are aligned with real-world requirements and deliver efficient, scalable solutions.

With clearly defined functional and non-functional requirements, a robust data model, a layered security design, and a six-step roadmap, FitHub CRM is positioned for structured, successful delivery on the Salesforce platform.

Next Phase: System Design & Salesforce Configuration

The outputs of this phase — data model, security model, and roadmap — feed directly into Salesforce object setup, Apex development, and Lightning component design.
